

Discover the difference an adjuvanted seasonal flu shot can make for adults 65 years and older^{1,2}

01

Why should I consider a flu shot specifically designed for adults 65 years and older?

As the body ages, it may not produce a sufficient protective response to the vaccine, leaving adults 65 years and older **more vulnerable to the flu and its serious complications**, including hospitalization or death.³

02

Is FLUAD[®] QUADRIVALENT right for me?

There are different types of flu shots, and some are specifically designed for certain age groups.³

FLUAD QUADRIVALENT is **specifically designed for adults 65 years and older**.¹

It is an **enhanced seasonal flu shot that is made using an adjuvant** to help boost your immune response to the vaccine in order to help protect you against the flu strains found in the flu shot.^{1,3}

FLUAD QUADRIVALENT is **preferentially recommended over standard-dose flu vaccines for adults 65+** by the CDC's Advisory Committee on Immunization Practices (ACIP). **Ask your doctor if it's right for you.**⁴

03

What is an adjuvant?

An adjuvant is an **ingredient used in some vaccines to help create a stronger immune response** in people receiving that vaccine. Adjuvants have been used in vaccines for decades.⁵

04

Is FLUAD QUADRIVALENT the same as the high-dose flu shot for adults 65 years and older?

While FLUAD QUADRIVALENT is specifically designed for adults 65 years and older, it is not a high-dose flu vaccine. Instead, it **contains the same dose as the regular flu shot but also includes a helper agent called an adjuvant to help boost your immune response** to the vaccine.^{1,3}

05

Who should not get FLUAD QUADRIVALENT?

Adults 65 years and older should not get FLUAD QUADRIVALENT if they have had a severe allergic reaction to any of the ingredients in the vaccine in the past, including egg protein, or a severe allergic reaction to a previous influenza vaccine.¹

FLUAD[®] QUADRIVALENT (Influenza Vaccine, Adjuvanted) Important Safety Information

What is FLUAD[®] QUADRIVALENT (Influenza Vaccine, Adjuvanted)?

FLUAD QUADRIVALENT is a vaccine that helps protect people aged 65 years and older from the flu. Vaccination with FLUAD QUADRIVALENT may not protect all people who receive the vaccine.

Who should not get FLUAD QUADRIVALENT?

You should not get FLUAD QUADRIVALENT if you have had a severe allergic reaction to any of the ingredients in the vaccine in the past, including egg protein, or a severe allergic reaction to a previous influenza vaccine.

Before receiving FLUAD QUADRIVALENT, tell your healthcare provider about all medical conditions, including if you:

- have ever had Guillain-Barré syndrome (severe muscle weakness) within six weeks after getting a flu vaccine. The decision to give FLUAD QUADRIVALENT should be made by your healthcare provider, based on careful consideration of the potential benefits and risks.
- have problems with your immune system or are taking certain medications that suppress your immune system, as these may reduce your immune response to the vaccine
- have ever fainted when receiving a vaccine

What are the most common side effects of FLUAD QUADRIVALENT?

- Pain or tenderness where vaccine was given
- Headache
- Tiredness

These are not all of the possible side effects of FLUAD QUADRIVALENT. You can ask your healthcare provider for more information.

What do I do if I have side effects?

Ask your healthcare provider for advice about any side effects that concern you. **To report SUSPECTED ADVERSE REACTIONS, contact Seqirus at 1-855-358-8966 or VAERS at 1-800-822-7967 and www.vaers.hhs.gov.** You are also encouraged to report negative side effects of prescription drugs to the FDA. Visit www.fda.gov/medwatch, or call 1-800-FDA-1088.

Before receiving this vaccine, please see the full US Prescribing Information for FLUAD QUADRIVALENT [here](#). The information provided here does not include all that is known about FLUAD QUADRIVALENT. To learn more, talk with your healthcare provider.
